Art Unit: 2142

1. Claims 1-38 are presented for examination.
2. Formal Drawings filed 10 May 2001 have been received by the Office and will be considered by the Drafting Division in due course.
3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
4. The applicant should use this period for response to thoroughly and very closely proof read and review the whole of the application for correct correlation between reference numerals in the textual portion of the Specification and Drawings along with any minor spelling errors, general typographical errors, accuracy, and clarity of meaning in the Specification, Drawings, and specifically claims.
5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2) (a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a); or

6. Claims 1-38 are rejected under 35 U.S.C. 102 (e) as being anticipated by Wilson et al. (US 6,738,821 B1).
7. Prior to addressing the grounds of the rejection, citation to figures and text within the reference serve only as an aid and are neither all-inclusive nor all-exclusive in nature. Thus the whole of the reference is cited.
8. Per claims 1,10, and 11, Wilson taught a method (e.g., see figures 6 and 7) in a data processing system (e.g., see figure 1F) for transferring data (e.g., see Abstract (line 8)), the method comprising:
a) sending a request ("Acknowledgement+Window"), wherein the request included an amount of available processing space ("buffer space" (this also addresses applicant's claims 10 and 11)) at the data processing system (e.g., see col. 18 (lines 18-24) and col. 1 (lines 33-49) (while keeping in mind "Windows", as used in TCP/IP, basically indicated to

Art Unit: 2142

the other computer in a network the amount of information the requesting computer can receive at any one time)); and,
b) receiving a subsequence of data packets from a set of subsequences of data packets in response to the request each time the amount of available processing space is free, wherein data within each subsequence within the set of subsequences of data packets fits within the amount of available processing space (e.g., see col. 13 (line 29-54)).

9. Per claim 2, see, for example, Abstract (second to the last line) and col. 17 (line 45 (third word)).

10. Per claim 3, see, for example, col. 13 (lines 43-54) and col. 18 (lines 18-24).

11. Per claims 4-9, see, for example, figure 3B (206c,206g), col. 15 (lines 5-20 "fragmentation") and col. 21 (lines 50-66) while noting these are basic TCP/IP operations.

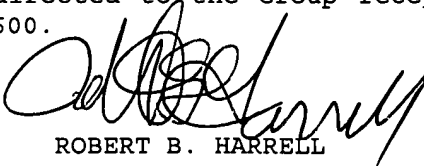

12. Per claims 12-38, these claims do not teach or defined above the correspondingly rejected claims given above and/or have already been shown present, or inherently present (i.e., computers of figure 1F inherently contained communication units, memory, processors and co-processors, multi-bus motherboards, and the like equivalent [for the application claimed means+functions] off the shelf products that executed the above cited method as a computer program product stored in a computer readable medium), in the above citations, and are thus rejected for the same reasons given above.

13. A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) days from the date of this letter. Failure to respond within the period for response will cause the application to become abandoned (see MPEP 710.02, 710.02(b)).
